DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-11, drawn a fiber optic sensor including N sensor heads that can be arranged in the shape of a coil around current conductors or along the magnetic field, at least one phase modulation unit to a fiber optic sensor including control and evaluation unit that is connected via at least one detector signal line to the at least one detector and via at least one modulator signal line to the at least one phase modulator, classified in class 385, subclass 12.
 - II. Claim 12, drawn to a method for measuring at least one electric current or at least one magnetic field the linearly polarized lightwaves being guided into N sensor heads in which the lightwaves undergo a phase shift, which phase shift depends on the current or magnetic field to be measured, classified in class 356, subclass 50.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case invention I can be used as

Art Unit: 2883

wavelength and/or current detection sensor in an optical communication system rather than mere current or magnetic measuring unit.

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. A telephone call was made to Mr. Keane on 1/10/05 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

7. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
